

# Introduction

## Overview

### Tracing the Growth of the Global Community: A Population Forecasting Analysis

The world's population is more than three times larger than it was in the mid-twentieth century. This dramatic growth has been driven largely by increasing numbers of people surviving to reproductive age, the gradual increase in human lifespan, increasing urbanization, and accelerating migration. Major changes in fertility rate have accompanied this growth. These trends will have far-reaching implications for generations to come.

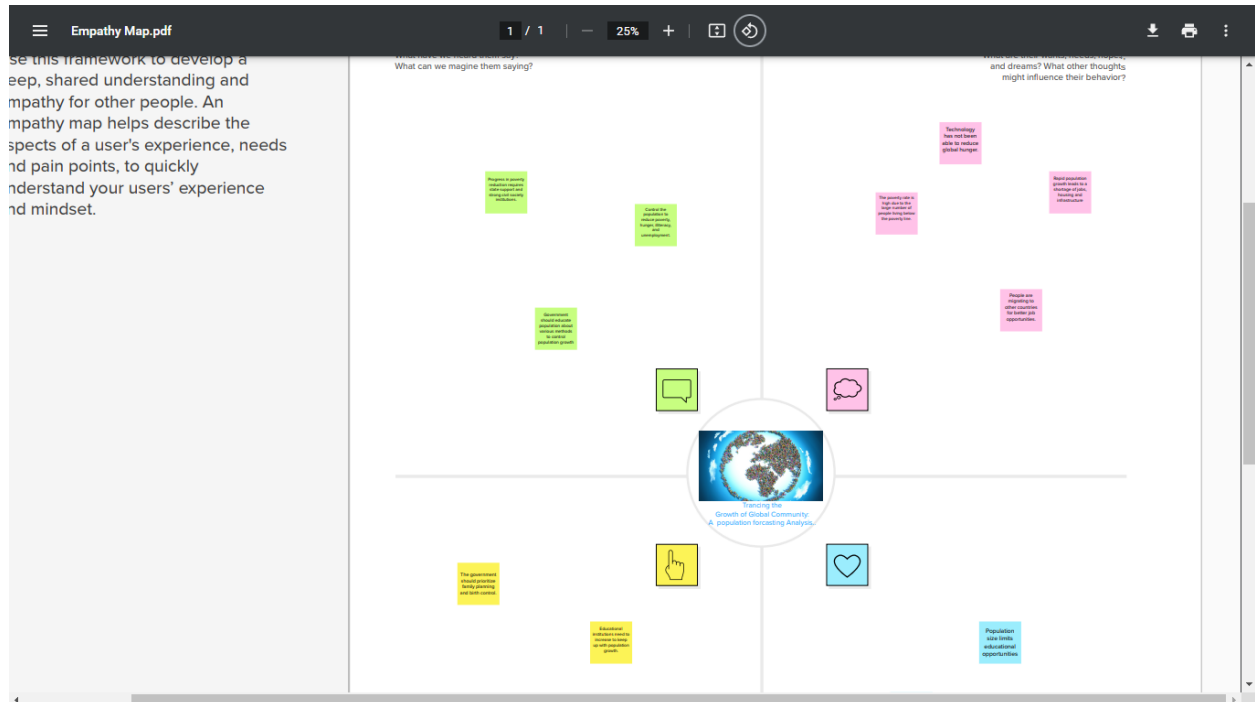

## Purpose

Analyses the population growth in global community and find out the problem and solutions

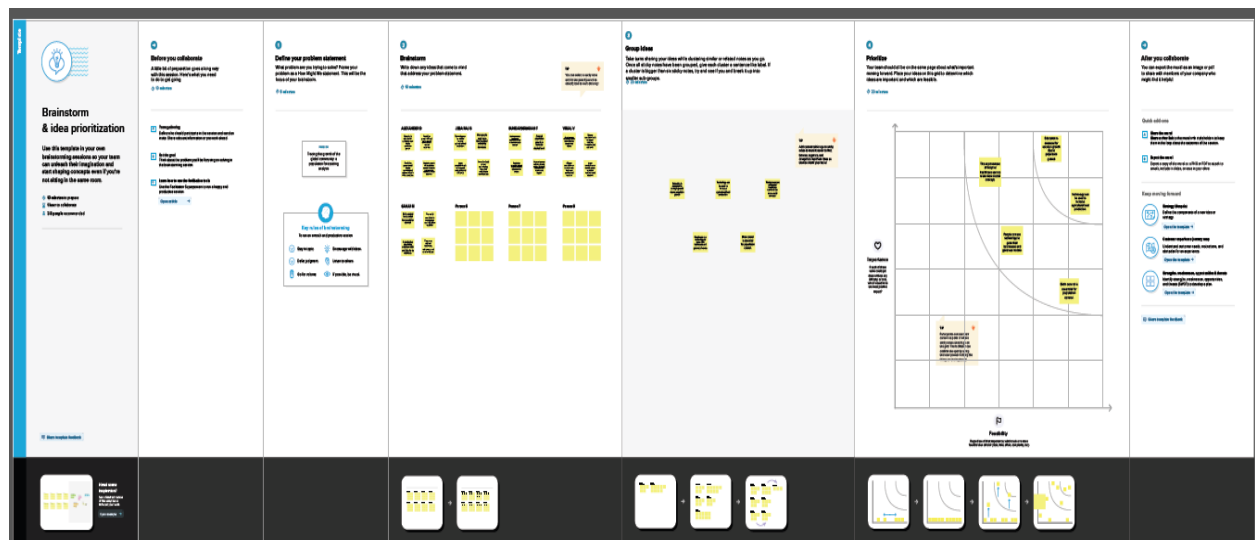

- Manpower will increase due to population growth.
- Technology is expected to increase in the future.
- Green revolution should be implemented to improve food security.
- Population counts are essential for governments to collect taxes and allocate funding.
- Moderate population growth helps to rebalance the population with a higher share of young, working people

### Population Of Cited By Year

Cty	Brazil	China	Egypt	India	Indonesia	Japan	Pakistan	Republic of ...	United King...	United Stat...
6th of October City			154,093							
AlGassiaAlndia	156,474									
Abaeluba	163,802									
Abbotabad							106,101			
Aberdeen									212,125	
Aberdeenshire									226,871	
Abiko						654,213				
Abilene (TX)										232,99
Abo Keber			103,175							
Abolar				124,339						
Achalpur				107,316						
Acheng		638,894								
Adilabad				238,932						
Adityapur				219,233						
Adoni				319,763						
Agartala				189,998						
Ageo						1,093,308				
Agra				2,606,473						
Aguas Lindas de Goiás	318,276									
Ahmedabad				8,045,098						

## **Advantages**

- Education is essential for society's growth due to population growth
- Educational institutions need to increase to keep up with population growth.
- More money will be available in tax revenue to fund public services like environmental and health care programs. The obvious conclusion is that GDP per capita is the essential element rather than GDP as a whole.
- In locations where unemployment is a serious problem, this will likely not lead to more jobs, but it will boost the number of individuals willing to work for less pay.

## **Disadvantages**

- Population growth will lead to increased exploitation of natural resources.
- More people need more food, but food availability was decreases.
- Over populated passion creates a large effect on the environment by exhausting a large proportion of waste. On the other hand, reducing forest which results the growth of pollution.
- By the unemployment, lack of income in family dose not afford to provide education to their children. Which results into creating a problem of illiteracy and again none awareness among the class.
- Population explosion accompanied with rapid industrialization and urbanization has led to greater demand for already deficient energy (fuel wood, fossil fuel and electricity).
- The lack of basic needs, such as food, clothing, and housing, is a major issue in a rapidly growing population, leading to slum areas and starvation.
- Overpopulation is causing environmental damage, leading to increased pressure on infrastructure, economy, environment, health care, and nutrition.

- There will be greater threat on natural habitats as a greater population has greater demand for housing and farmland. This will increase pressure to cut down forests to make way for farming and housing.

## **Applications**

- Population growth could lead to technological advancements in military products.
- Population growth will increase the number of soldiers and resources needed to defend countries.
- Technology can be used to increase agricultural food production.
- specialization enables countries to export and participate in globalization. Producers can export commodities to areas afflicted by natural catastrophes or artificial risks instead of only producing locally.

## **Conclusion**

The population is a complicated subject with benefits and drawbacks. Even though population density might be a sign of economic expansion, it has other negative environmental effects, including a lack of fresh water. It might boost economies and industries while also encouraging greater innovation. Additionally, it can put food, property, and other limited resources like water at risk.

## Future scope

- Wealthy countries and the international community can support low-income and lower-middle-income countries by providing technical and financial assistance.
- Government should allocate land to villages to farm due to food scarcity.
- The government should prioritize family planning and birth control.
- It will benefit people's lives by providing opportunities and choices for all in all fields
- well-researched planning and implementation on how to harness the population growth for the maximum economic benefit of the society and country.
- Population growth will lead to economic growth with more people able to produce more goods. It will lead to higher tax revenues which can be spent on public goods, such as health care and environmental projects.
- Both agricultural and industrial economies were able to benefit, meaning that as the population increased, food production and manufacturing output had to grow faster than population growth.
